STAKING GUIDE

v 1.0

08/28/2018

DarkPayCoin

GET YOUR WALLET UP & RUNNING

Download the version corresponding to your OS :

<https://github.com/DarkPayCoin/releases/>

UNPACK & LAUNCH IT

Windows : double-click darkpaycoin-qt.exe

Mac : open the dmg file and drag darkpaycoin to apps

Linux : click darkpaycoin-qt or in shell : `./darkpaycoin-qt`

GET SOME COINS

We have some interesting [bounty programs](#) ...

STAKE

After 3 hours, coins in your wallet will start to stake..Your wallet must also be open and staking enabled (`staking=1` in your `.conf` file)

Look at your wallet :

You can verify the staking status in the console :

getstakingstatus

The screenshot shows a 'Tools window' with a 'Console' tab selected. The console displays the following text:

```
02:03:23 Welcome to the DarkPayCoin RPC console.  
Use up and down arrows to navigate history, and Ctrl-L to clear screen.  
Type help for an overview of available commands.  
02:12:54 getstakingstatus  
02:12:54 {  
  "validtime": true,  
  "haveconnections": true,  
  "walletunlocked": true,  
  "mintablecoins": true,  
  "enoughcoins": true,  
  "mnsync": true,  
  "staking status": true  
}
```

or using the cli :

darkpaycoin-cli getstakingstatus

RULES

You know there's no rule. Just the likelihood of receiving a reward is linked to the total amount of coins you have.

HELP
